PROFESSIONAL SUMMARY

Full-stack web developer specialising in React and Node.js, currently in the 1st year of B.Tech CSE (AI & ML) at ABES Engineering College. Built and deployed three production-grade web applications — including an AI-powered exam prep platform using Groq LLM and a full-stack ChatGPT clone — with live URLs and documented codebases. Seeking a web development internship to contribute from day one.

PROJECTS

ExamForge — AI Exam Prep Platform | [Live Demo](#) 2026

[React](#) · [Vite](#) · [Node.js](#) · [Express](#) · [PostgreSQL](#) · [Groq \(Llama-3.3-70b\)](#) · [JWT Auth](#) · [Tailwind CSS](#)

- Built an AI-powered exam prep platform that generates subject-specific MCQs and short-answer questions in under 2 seconds using the Groq API (Llama-3.3-70b-versatile model).
- Implemented JWT-based authentication with secure refresh token rotation, protecting user sessions and personalised exam history stored in PostgreSQL.
- Designed a full analytics dashboard giving students performance insights across topics, question types, and accuracy trends over time.
- Deployed frontend on Vercel and backend on Render with a fully documented REST API and GitHub repository with setup instructions.

NexaGPT — AI Chat Assistant | [Live Demo](#) 2025–2026

[React](#) · [Node.js](#) · [Express](#) · [MongoDB](#) · [OpenAI API](#) · [Markdown Renderer](#) · [Syntax Highlighting](#)

- Developed a production-ready ChatGPT-inspired assistant with multi-thread conversations, persistent chat history via MongoDB, and real-time streaming responses from the OpenAI API.
- Implemented full markdown rendering and code syntax highlighting for assistant responses, matching the experience of commercial AI chat products.
- Built responsive UI from scratch in React with clean thread management, message search, and mobile-optimised layout — no UI library dependencies.

WanderLust — Property Listing Platform | [Live Demo](#) 2025

[Node.js](#) · [Express](#) · [MongoDB](#) · [EJS](#) · [Passport.js](#) · [Cloudinary](#) · [Mapbox API](#)

- Engineered a full-stack Airbnb-style platform with user authentication (Passport.js), property listing CRUD, image upload via Cloudinary, and interactive maps with Mapbox.
- Implemented session-based auth with role-based access control — only property owners can edit or delete their own listings.
- Deployed on Render with environment-variable-secured API keys and a seed script for demo data population.

TECHNICAL SKILLS

Languages:	JavaScript (ES6+), Python, HTML5, CSS3, SQL
Frontend:	React, Vite, Tailwind CSS, EJS, Markdown / MDX
Backend:	Node.js, Express.js, REST API design, JWT Auth, Passport.js
Databases:	PostgreSQL, MongoDB, Mongoose ODM
AI / APIs:	Groq API (LLaMA 3.3), OpenAI API, Cloudinary, Mapbox
Tools & Platforms:	Git, GitHub, Vercel, Render, Postman, VS Code

EDUCATION

B.Tech — Computer Science & Engineering (AI & ML) 2025 – 2029

ABES Engineering College, Ghaziabad (Dr. A.P.J. Abdul Kalam Technical University)

SGPA: 9+ (Sem 1)

Relevant coursework: Problem Solving with C, Engineering Mathematics, Basic Electrical Engineering

VOLUNTEERING & COMMUNITY

Volunteer — CodeChef Chapter ABESEC 2026 – Present

- Contributing to competitive programming events, workshops, and coding contests organised by the CodeChef chapter at ABES Engineering College.
- Helping onboard and mentor freshers in problem-solving and introductory web development concepts.
